

OmniMount® - UK - Premium HT Speaker Mounts/Brackets

SB 20- Premium HT Speaker Mounts/Brackets

The SB 20 Mounts (Also known as the OmniMounts®) are premium mounts offering a higher degree of flexibility ,durability and mounting options for almost any kind of speaker. The black speaker mounts are designed to fit office, home, theater satellite speakers with one threaded mounting hole, two threaded mounting holes or keyhole mounting systems. The mounts provide outstanding performance for most mini, satellite and bookshelf style speakers weighing less than 10 pounds.. It provides simple tilt, pivot and rotation adjustments as well as a unique combination of simplicity and security.

Each bracket can be adjusted for tilt and swivel so you can point each speaker to the proper angle for the optimum audio experience. These are made from durable injection moulded fiber resin reinforced polymers and are virtually unbreakable. Tilt/pan is offered upto 180° each. They come with various adapters and extension arms that allow you to precisely load any speaker in more than a single way. Extension arms work well for many speakers that require to be mounted at a distance from the rear wall so that there is no bass boom or undue reflections. In addition to the above these are ceiling mountable as well. Adapters are included that allow you to either screw on speakers to the mount or use keyhole mounting.

Following brands are supported

Bose, Denon, Infinity, Insignia, Kenwood, LG, JVC, Onkyo, Panasonic, Philips, Pioneer, Samsung, Sony, Yamaha, Zenith and more

Infinity Reference Bookshelf Wall Mounts

One of our most eagerly awaited and requested in house productions.

The Soundfoundations **Infinity** speaker mount exemplifies how a true reference monitor wall mount must be designed and executed.

We pulled out all the stops while designing this mount and we can proudly state that one will rarely find a speaker mount better than this. One of the few mounts internationally available that allow you to load your standmounts without having to drill holes into your precious speaker or permanently screwing them onto a hideous rotating plate (in effect, damaging your speaker back)

Being the only mount in the world (as far as we know) that is made from FORGED aluminium (as opposed to castings and welded fabrications) it offers movement about all 3 axis of rotation. In addition to the above, the extension arm itself also swivels for proper toe in. The arm allows a regular 12 inch deep speaker to be mounted leaving 4 inches from the rear wall, thus being useful for even rear ported applications.

With a load bearing capacity upto 50kgs! and accommodating bookshelves upto 28 inches deep, this mount truly has no competition. The infinity is highly recommended for studio applications for higher end monitors where accurate positioning is required coupled with supreme support. Home users who do not have the space for a stand may very well have this as an ideal alternative.

- Suitable for all standmounts
- Heavy Forged aluminium construction with multiple isolation
- Weight bearing Cap 50kgs/speaker
- Rotations about all axis for precise positioning and toe in
- Long Swivel able arm makes it suitable for even rear ported applications

ST 40 Satellite/Home theatre Speaker Stands

ST 40 Satellite/Home theatre Speaker Stands

A set of 2 black steel constructed height adjustable speakers stands, ideal for home cinema surround satellite speakers, they each have cable management to help hide your wires! With a height that is adjustable from 68 to 110cm you are set to get the best audio range from your speaker set up!
